

School Garden Sustainability Summit

Successful Regional Support Models

School Garden Sustainability Summit

Where:
The Life Lab Garden Classroom
University of California at Santa Cruz

When:
September 10-11, 2009

Who:
Select School Garden Professionals

A part of Life Lab's 30th Anniversary Celebration
www.lifelab.org/birthday.php

Across the nation there are a multitude of regional support models that sustain garden-based learning efforts in schools. Our summit will document successes and challenges of school-based garden programs including:

- funding mechanisms
- curriculum use and dissemination
- garden-based learning professional development
- community support models
- policy & district support models
- nutrition education models
- effective networking & communication
- garden creation & maintenance

There is no "one way" to create successful school gardens program. Our summit goal is to share the common roots that grow success and publish our findings.
